DETAILED ACTION

Allowable Subject Matter

1. Claims 4 and 8 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 rejected under 35 U.S.C. 103(a) as being unpatentable over Weber et al. (6,242,789) in view of JP 04348517

Regarding Claim 1-3 and 5-7, Weber et al. disclose a vertical fuse and method of fabrication where in Fig. 14 a substrate 12 is located all the way bottom. On top of the substrate 12 a dielectric layer 14 is located. A conductive layer 16 is located on dielectric layer 14. Aluminum deposition layer 116 is located on top of the combination of dielectric layers 18 and 26. A vertical conductive/fuse layer is extends from the Aluminum layer 16 to the bottom conductive layer 16. Liner/sidewall layers 114 and 104 extend from the aluminum layer 1169 to the bottom conductive layer 16. Weber et al. fail to disclose the required gradual narrowing of the hole. However, JP 04348517 discloses a contact hole with polycrystalline semiconductor sidewall with hole narrowing

Art Unit: 2826

towards base of the hole where in Figs. 7 and 12 the required narrowing of the hole is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required hole narrowing in Weber et al. as taught by JP 04348517 in order to have a semiconductor device with increased performance.
